

PLAN. PREPARE. PROTECT.

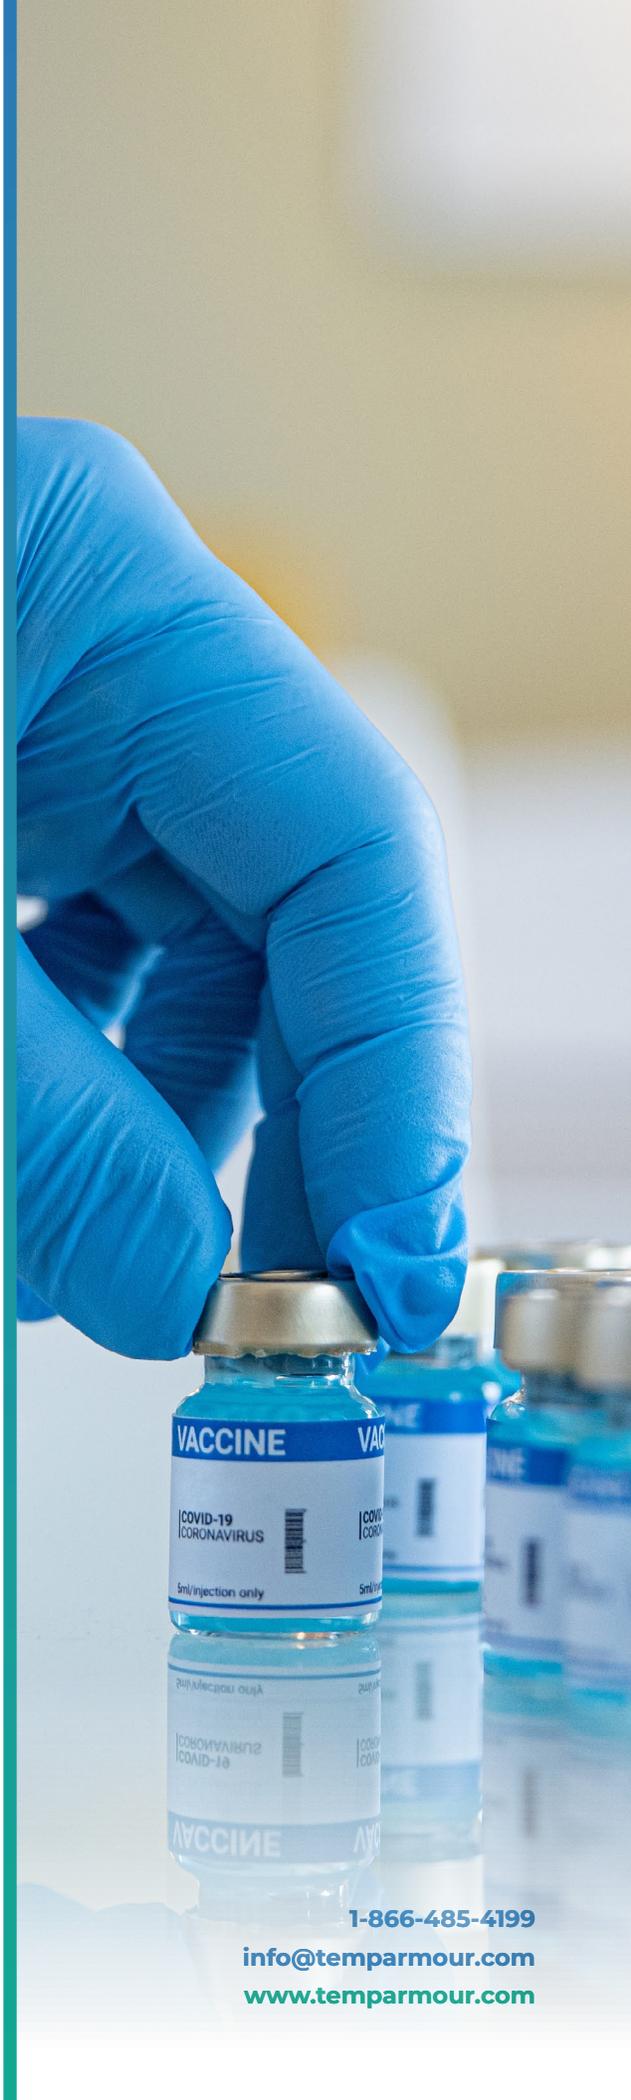

Get up to six days of reliable temperature protection in an outage with TempArmour® refrigerators, freezers, and medical coolers.

Government agencies recommend households plan to have enough food, water, and basic supplies for up to 72 hours (three days) in an emergency. If you're a medical provider, you also need a plan to protect critical temperature-sensitive supplies.

A single degree can make a difference in safety and efficacy. Get medical-grade storage that maintains stable temperatures when it matters most.

TempArmour products use phase-change material (PCM), a chest design configuration, and insulation technology to increase temperature stability and holdover time during storage and transport.

Plan Confidently With Trusted Refrigerators and Freezers

Make sure your cold storage solution adheres to safe temperature and storage requirements. Stay protected for **up to six days** without power – no backup system required.

- ✓ Stable temperatures maintained with PCM-insulated lining
- ✓ Proper door closure and chest configuration keep cold air in
- ✓ Long-lasting low temperatures for minimal power consumption
- ✓ Designed for outage protection
- ✓ Easy supply access with included organization system
- ✓ No on-site inspections or ongoing maintenance
- ✓ Holds more than 1,000* vaccine or medicine doses

**Refrigerators hold up to 200 boxes of 10 x 0.5 ml vials; freezers hold 100 boxes of 10 x 0.5 ml vials (based on typical manufacturer box sizes)*

Medical Coolers for Emergency Response

Protect emergency supplies during transportation and confidently deliver life-saving care. Use lab-qualified medical coolers that remain within range for **up to three days** when closed and provide **at least eight hours of stable temperatures** during regular open-and-shut access.

- ✓ PCM and vacuum-insulated panel (VIP) technology for uniform temperatures
- ✓ Infrared laser (IR) thermometer to measure panel temperature prior to packing
- ✓ Ergonomic design features for easy transport and access
- ✓ Additional storage for data loggers, documents, and personal items
- ✓ Holds more than 500* vaccine or medicine doses
- ✓ ISO 17025-calibrated data loggers available for ongoing temperature monitoring (not included)

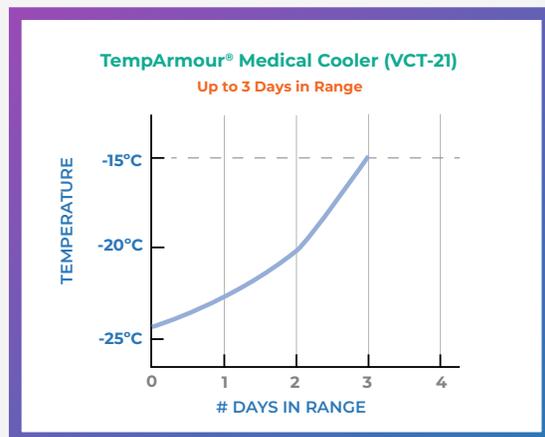

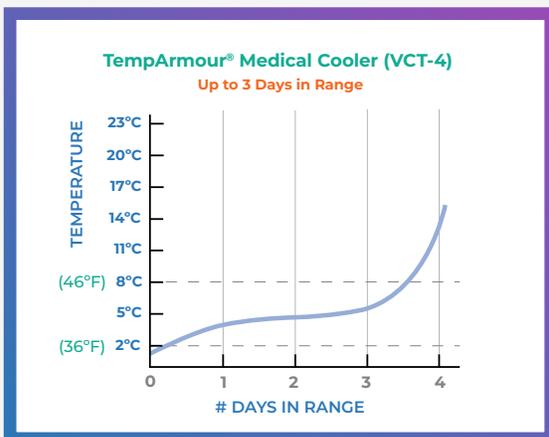

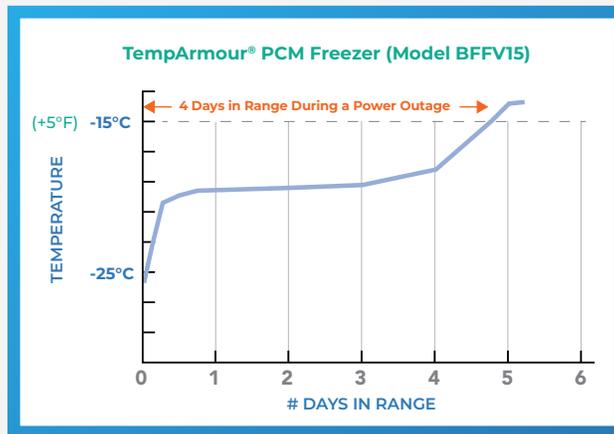

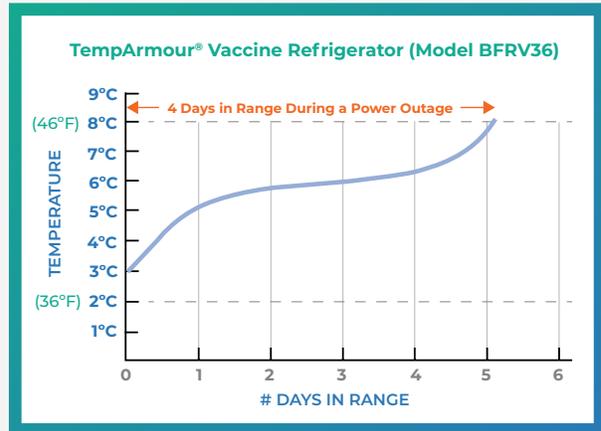

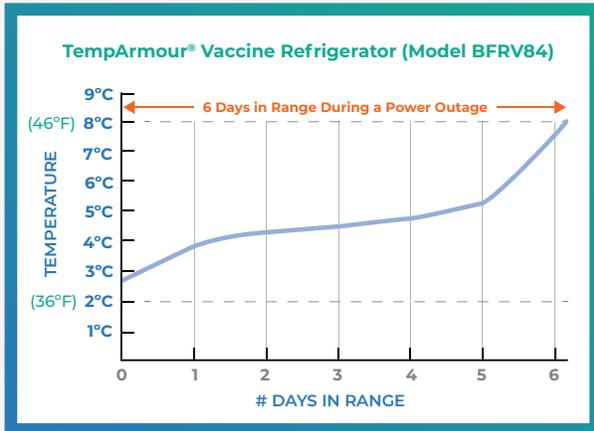

* 500 x 0.5 ml vials or 120 single-dose syringes
(based on typical manufacturer box sizes)

Better Than Backup Power

Eliminate costly losses and staff time to move at-risk inventory and make sure critical supplies are effective and available when needed. TempArmour products deliver the time you need to execute your emergency plans and provide care safely.

Purpose-Built Protection

No water bottles, no backup power, no remote monitoring – TempArmour products are designed to help you optimize:

Supplies

Eliminate supply loss with uniform, in-range temperatures.

Space

Choose high-performing options that offer the same capacity as larger upright models.

Costs

Minimize expenses with maintenance-free equipment that performs without a backup system.

Time

Reduce staff hours and overtime by eliminating cold chain incidents.

“The performance of the TempArmour refrigerators through Hurricane Irma was outstanding with no issues at all. We had refrigerators with vaccines in several facilities that had the power out for 2-3 days and all stayed within the required temperature range.”

Van D.

Peace of Mind When You Need It Most

Focus on what matters in an emergency with simple, quality, and efficient cold chain storage built to stay within range.
